

PRE CONFERENCE COURSE -3

ORTHOGNATHIC SURGERY

OVERVIEW

Over recent years, the treatment of maxillofacial conditions with orthognathic surgery has undergone a revolution. The reach and objectives of this kind of surgery have been redefined so as to cover three basic pillars: 1) Correcting underlying malocclusion and skeletal discrepancy; 2) Upper airway obstruction management; 3) Harmonisation of facial aesthetics . This course will provide an introduction to orthognathic surgery. Orthognathic surgery requires close teamwork between orthodontist and surgeon. This course will include diagnosis, case selection, treatment planning and execution of treatment and will describe the collaboration between the specialists and flow of treatment. Also, the course will address orthodontic and surgical considerations before initiating treatment, surgical techniques, risks and complications. Furthermore it will introduce you to a method of systematic dentofacial analysis in all three dimensions with emphasis on both static and dynamic relationships, as well as both functional and esthetic objectives. This course is aimed at trainees or specialists in Oral and Maxillofacial Surgery who wish to expand their knowledge in orthognathic surgery with live hands-on OT Table demonstration.

OBJECTIVES

- To review the relevant clinical anatomy for treating maxillofacial conditions.
- To review and practice all the contemporary techniques in orthognathic surgery
- To review and execute all contemporary techniques in facial esthetics optimization in the context of orthognathic surgery.
- To review and practice all the contemporary techniques in facial aesthetics in the context of orthognathic surgery.
- To provide an update of surgical techniques in this field of knowledge.
